CONTENTS

1. **SOLUTION OVERVIEW** 2
   - **1.1 GOAL OF THE SOLUTION** 2
   - **1.2 IMPLEMENTATION BENEFITS** 2
   - **1.3 TECHNICAL SPECIFICATION** 3
   - **1.4 HIGH LEVEL DESIGN & UML** 4
   - **1.5 OPPORTUNITY & RISK ESTIMATION** 5
   - **1.6 GOVERNANCE OF RISK MITIGATION** 5

1. Solution Overview

The solution **Quality Management System (QMS)** is a web-based application for digitalizing business process and workflow for **GainwellIndia** repair and maintenance workshop. Where the user of QMS system can check/approve, communicate certain service request in structured manner, if require can investigate the history as well.

1.1 Goal Of the solution

The main goals of **QMS** are as follows

- QMS Portal - aesthetically designed and curated navigation with cornerstone content created to match the portal's goal in creating a GUI for the users and admin.
- Able to track every service requests
- Digitalization of business logic and flow
- Approval and rejection options at every stage of the flow with proper comments
- Maintenance of different equipment specific data (Model) , flow may vary as per different models
- Notification to proper department at every stage
- Integration with other third-party application through API like SAP
- Proper role management & different GUI view and options as per the role management

1.2 Implementation Benefits

When **QMS** is supposed to give below benefits

a. Seamless experience for end users to access and find relevant information of the SR. Notification to several department.
b. Integrations with the current backend database, for order integration with SAP.
c. Analytics dashboard for users to draw insights on the data.
d. Proper workflow management & digitalization of the existing workflow and process

1.3 Technical Specification

Existing System: Support scope

- PHP Laravel framework
- Backend MySQL database
- Integration with SAP

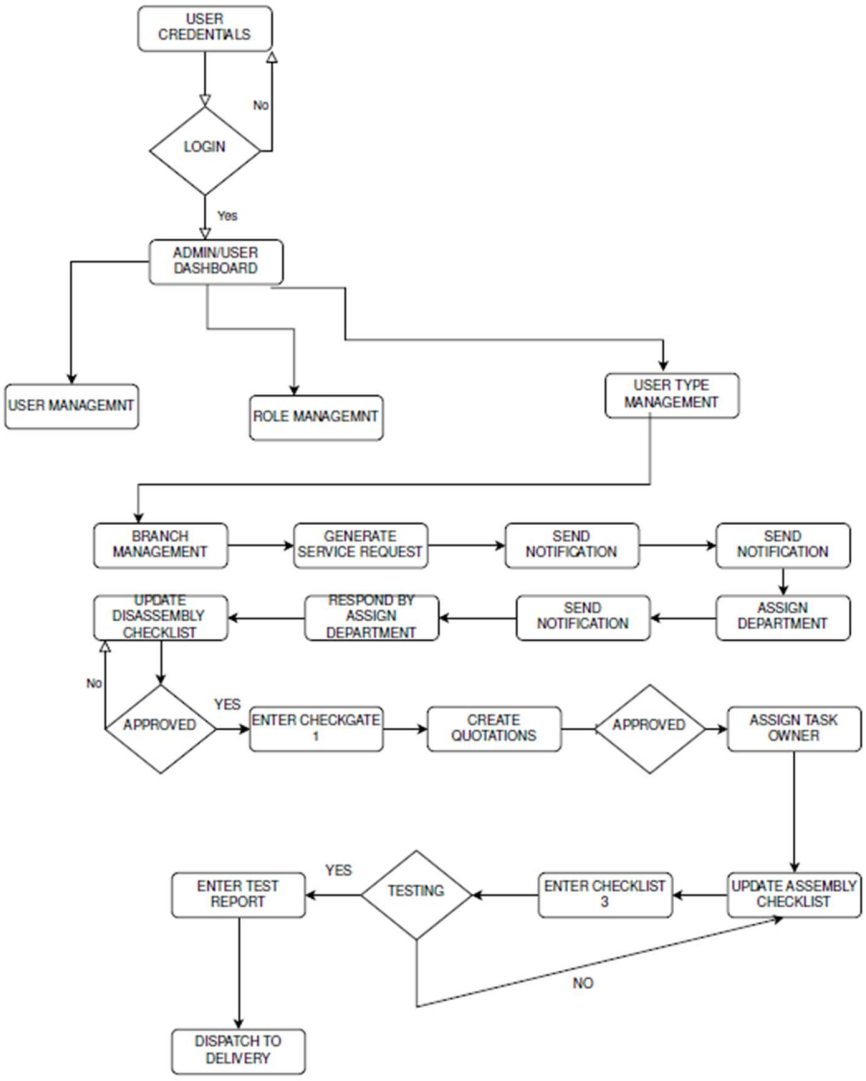

Enhanced System Development: Development Scope Proposals

- Backend MySQL database still we will use this as a backend database access * (Revised proposal to maintain new db and data migration from old db to new db)
- Hosting server to be provided by GainwellIndia, we preferred Linux server
- Integration with SAP
- Integration of 3rd Party SMS gateway for SMS notification, SMTP server details for Email Notification
- Any software that is required to purchase for the development need to be purchased separately, however we prefer to use open-source software for the development.

Proposed Technology Stack

- Backend Frame work : Python 3.8
- Web Services Frame Work : Django 4.0 & Jinja 2
- Database & Data lakes : Postgresql 13

1.4 High level Design & UML

1.5 Opportunity & Risk Estimation

Opportunity

We could be able to build the entire solution before the proposed timeline if we are very clear with respect to requirement standpoints. From opportunity point of view, we may reuse some of the components and business logic existing in QMS V1. We are hopeful to get full support and collaboration from GainwellIndia IT, Business & Quality team, and jointly we can develop the solutions as per its need and requirements.

Risk Estimation

As per risk multiple points also may involve. COVID related health issues of our associates and employees are the biggest risk as of now, which may further delay the entire project plan. Another risk may arise to get and retain the correct competent people, so far being a startup, we are relaying on 1-2 competent resources on each domain, and we don't have enough redundancy in our team, so exit of any existence team members can also hamper the proposed time plan. Our proposed technology stack may vary when we are up to the real project, and based on the challenges we may need to adapt other technology stack.

1.6 Governance of Risk Mitigation

TBD. Miogenlogic & GanwellIndia will again discuss and create the mitigation plan for the risks which may involve time to time.
